"Purification, amino acid sequences and assay cross-reactivities of porcine insulin-like growth factor-I and -II.";

J. Endocrinol. 122:681-687(1989).

-I-FUNCTION: The insulin-like growth factors possess growth-promoting activity. In vitro, they are potent mitogens for cultured cells.

IGF-II is influenced by placental lactogen and may play a role in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     growth
